

This instruction shows how to get all required fields for the app to operate.

Needed items are:

1. Gemini API key
2. Notion API key
3. Notion table key

Gemini API key

1. Open Google AI Studio (<https://aistudio.google.com/api-keys>)
2. Generate API key and copy-paste into the application to Gemini key

Notion table key

1. Create Notion table with following columns (follow column titles precisely):
 - a. Date (type date)
 - b. Title (type text)
 - c. Text (type text)
 - d. Tags (type multi-select)
 - e. Media (type Files&Media)

- f. Mood (type Select)
2. When table opened in browser you will see a link like:
<https://www.notion.so/14e080c4387e816292bdf5fed5f0e2fc?v=f59712ec84594011ace7f8606f5c8d14>, in this link – table ID is
 14e080c4387e816292bdf5fed5f0e2fc, or
<https://www.notion.so/14e080c4387e816292bdf5fed5f0e2fc?v=f59712ec84594011ace7f8606f5c8d14>
 3. Insert this key into your app

Notion API Key

1. Create Notion account
2. Open <https://www.notion.so/profile/integrations> and create new integration
3. When created it will show you an integration secret – that's the API key to paste
4. Open Access tab and select created table to give access through the connection to
